

AMMUNITION CATALOG
2023

IN ALL WEATHER CONDITIONS
RELIABLE DETONATION

TECHNICAL SPECIFICATIONS FOR CENTERFIRE

By definition, Centerfire rounds have a detonator located right in the center of the cartridge case head, which is a separate and replaceable component. Unlike Rimfire cartridges, which are fired from edge and have fewer components, Centerfire Ammunition gets struck when it hits the detonator.

Non-corrosive detonators are used in our cartridges to ensure reliable detonation in any weather condition. With a wide variety of calibers, Aguila® offers superior quality ammunition.

PISTOL

.380 AUTO FMJ
FULL METAL JACKET*

 **1E802111**
